

ECOSENSE[®]

OEM Partnerships

Elevate your brand with premium engineering

Beauty. Brains.

When you choose Ecosense, you choose a suite of top-shelf lighting technologies equal to your vision, designed to take you to market faster—and better. But our industry-bending OEM solutions only go as far as our ability to execute. That's why we've meticulously engineered our manufacturing model too, ensuring we're always able to deliver products of consistent excellence, shipping in as little as 48 hours and no more 2 weeks. Add our best-in-class service, and you've got yourself a partnership in the purest sense: strong, smart and sustainable.

TROV FLeX

- IP67 rated linear light engine for outdoor and indoor use
- 2700K, 3000K, 3500K, 4000K
- 3 beam angles
- 90+ CRI standard
- Dimmable to 0%
- Silicone construction won't crack, yellow or fade

SORAA Lamps

- LED lamps with VIVID™ and ZEROBLUE™ technology
- 2700K, 3000K, 4000K (2200K with SNAP filter)
- Beam angle options vary
- Up to 95 CRI
- Compatible with most dimmers and drivers
- Modifiable with SNAP System lenses and louvers

[View all Soraalamps](#)

LDCM

- Converts a 0-10V signal to reverse phase dimmed output
- Enables 0-10V dimming on ELV-only fixtures
- Mounts directly on J-box or luminaire
- Auto-sensing 120V and 277V compatible
- 450W @ 120V, 1000W @ 277V
- Plenum rated

TROV Flex

Say bye-bye to boring.

If you can dream it, TROV Flex can make it happen. A true plug-and-play light engine featuring bio-friendly, all-silicone construction, TROV Flex is flexible enough to go toe-to-toe with your imagination, discreet enough to fit in almost anything, and durable enough—with an IP67 rating—to handle applications both indoors and out. The standalone design can simply be mounted into your luminaire, dramatically speeding up your design process and bringing your fixtures on par with the best with an incredible 8100cd CBC and your choice of 3 beam distributions, 4 CCTs, and dimming down to 0%. That's right, zero.

SORAA Lamps

Ace the eye test.

Your designs are ultimately only as remarkable as the light they output. So emit the absolute best by outfitting them with Soraa full spectrum lamps, compatible with the vast majority of commercially used drivers and dimmers. The gold standard in spectral quality, Soraa VIVID™ renders truer colors, richer reds, and brighter whites. Soraa ZEROBLUE™ technology offers similar spectral vibrancy in a blue-free light, opening you up to the emerging field of circadian lighting. And for any further fine tuning needed, you can simply shape your beams and shift your colors with our SNAP SYSTEM™ of magnetically attached lenses and louvers.

Dimming Control Module

Dim the lights. Finally.

Dimming challenge accepted. Stop burning through engineering hours figuring out how to bring 0-10V dimming to ELV-only fixtures. Our Dimming Control Module does it for you. With an auto-sensing voltage switch for 120 and 277 volts, this miraculous box transforms static line voltage into dimmable, reverse-phase ELV. It can be installed at the junction box or integrated directly into your luminaire, making it your turn-key solution for new products and existing stock upgrades alike.
