COLOR CONSISTENCY

EcoSense Lighting boasts exceptional color consistency across all products as a result of strict LED binning methods. First, EcoSense works closely with LED manufacture(s) to secure LEDs from the tightest binning, selecting only LEDs that fall within a bin standard that is 1/4 the size of ANSI Standard (C78.377A). Secondly, EcoSense applies an internal binning process that ensures even more reliability and even tighter LED bins for the final product. In these bins, color temperature will be maintained within 2 MacAdam Ellipse, ensuring the most consistent light quality. The result is beautiful, uniform color consistency from fixture to fixture.
