## EcoSpec<sup>®</sup> Floodlight Wash Square Louver

The Square Louver for the EcoSpec Floodlight Wash provides glare control and sight line reduction for applications that require these additional measures. The Square Louver provides 45-degree cutoff, and the louver vanes run between the LEDs, with no interference with the narrow beam distribution. This louver accessory fits securely in the lens holder, and takes the place of the optical film panel with the same method of installation. The louver is available in white and black finish to match the fixture.

**FOR USE WITH:**  
**EcoSpec<sup>®</sup> Floodlight Wash**
