

The Right Light for a Healthy Life

World's First and Only Circadian Light

Backed by decades of circadian science. Protected by 500+ patents. Engineered by OIO.

Circadian lighting is not a trend.
It's a biological necessity.

For more than a century, scientists have studied how light governs every cell in the body, regulating sleep, hormone balance, immune strength, cognition, and long-term health.

OIO transforms that science into architecture. Our patented technology delivers precision-tuned circadian light into built environments, automatically shifting throughout the day and evening to support human physiology.

What sunlight does outdoors, we recreate indoors with control, consistency, and precision fidelity.

The Global Standard in Circadian Architecture

Products Built for Modern Commercial Spaces

Proprietary designs built for buildings where biology matters. Our circadian lighting delivers full-spectrum control in a variety of architectural form factors.

We offer four leading commercial systems:

1 OIO Plane

Uniquely designed into recessed pockets creating a seamless surface that disappears into the room.

2 OIO Grid

Ceiling panels with discreet profiles, designed for wellness-first environments.

3 OIO Line

Architectural linear fixtures with interchangeable optics tailored for office environments.

4 OIO Bar

Architectural accent linear platform engineered with your health in mind.

The Most Powerful Part of Light Is the Part You Can't See

Light is a Signal to Every Cell in Your Body

Every light source has a spectral fingerprint – a precise distribution of energy across different wavelengths. That fingerprint determines how the light interacts with your biology.

These charts show light spectra; they look like sideways rainbows – and indicate how much energy is in each part of light. The taller the section, the more energy that color is putting out.

The blue band of light (**440–495nm**) carries extraordinary biological power. During the day, it sharpens focus, synchronizes your circadian rhythm, and regulates hormones, just like the morning sun. But at night, even small doses of this same blue band delay melatonin, impair sleep, and disrupt cellular repair.

This isn't theory, it's backed by decades of circadian science, and it's been documented in over **25,000** peer reviewed studies.

The World Health Organization now classifies circadian disruption as a probable carcinogen. Researchers have linked nighttime blue light to cancer, diabetes, and metabolic disease.

At OIO, we engineer spectrum and timing. Our patented light engines, developed over decades and backed by **500+ patents**, deliver biologically active wavelengths at the right time of day, signaling alertness in the morning and supporting wind-down in the evening.

Same wavelengths. Different times. Different effects on the body. That is the precision of OIO.

The presence of blue light promotes wakefulness.

The absence of blue light promotes melatonin production.

Biological Light, Built Into the Architecture

**Light Is Not Neutral.
It's Not a Utility.**

Humans are biological beings.

Our bodies respond to energy, and light is energy. OIO Plane is the first circadian fixture engineered to disappear into the architecture while working for the people inside.

OIO Plane delivers precision tuned, circadian supportive light, energizing alertness during the day and protecting restorative rest at night.

Where architectural simplicity meets the science of human well-being.

OIO Plane

A Surface, Not a Fixture.

Just light, where light belongs.

OIO Plane is engineered to dissolve the boundary between fixture and architecture, delivering gradient scenes that match the colors and spectra of the sky. It installs into recessed pockets to create a seamless surface that disappears into the room.

No grilles. No diffuser pattern. No fixture profile breaking the ceiling/wall plane.

Ideal for:

- Luxury Hospitality
- Premium Fitness Studios
- Luxury Multifamily

Invisible by design. Powerful by purpose.
Light exactly where it belongs.

Lighting That Protects Health and Enhances Life

Light at the right time.

OIO Grid is engineered to work in sync with the body's internal clock, delivering energizing illumination when it's needed most and safeguarding restful nights.

This is light designed to preserve vitality, promote comfort, and help people thrive.

More comfort. More focus.

More connection to the natural rhythm of life.

OIO Grid

Designed Into Every Environment

Built for the spaces where well-being is paramount.

OIO Grid integrates into standard ceiling grids and automates the transition from day to night, bringing circadian supportive light into spaces where other wellness lighting falls short.

Ideal for:

- Workplaces
- Senior Living
- Hospitality

This is light that does more than illuminate. It works with the body's clock to support health, alertness, and rest, in every environment, around the clock.

Designed Around Human Rhythms

Light that adapts to
the way people work.

The way we experience a space is shaped by light.

OIO Line is engineered to align lighting with the body's natural biological rhythms, supporting focus, visual comfort, and well-being throughout the day.

By combining architectural simplicity with advanced circadian technology, OIO Line helps create environments that enhance performance while maintaining a clean, contemporary aesthetic.

More energy. More comfort.

More connection to the natural rhythm of life.

OIO Line

Lighting That Works for People

Well-being designed into every space.

Throughout the day, OIO Line automatically adjusts the spectral composition of light to provide the perfect circadian alignment our bodies naturally respond to.

During active hours, it promotes alertness, focus, and productivity. As the day progresses, our lighting technology transitions toward biological darkness, allowing the body to naturally prepare for evening wind-down and nighttime cellular repair.

Ideal for:

- Corporate Offices • Collaborative Workspaces
- Educational Buildings • Wellness Spaces
- Senior Living

The best lighting does more than illuminate a space. It supports the health and wellbeing of those within it.

Permission to Be Bold

Precision light.
Human-centered impact.

Light has the power to reveal architecture, transform materials, and define how a space is experienced.

OIO Bar combines precision grazing and washing optics with advanced circadian technology, allowing designers to highlight texture, create visual depth, and support occupant well-being throughout the day, evening and night.

From luxury hospitality environments to premium residential and commercial interiors, OIO Bar delivers light with exceptional control and biological purpose.

Reveal every surface.
Enhance every experience.

OIO Bar

Architectural Lighting Reimagined

**Built for beauty.
Designed for people.**

With the industry's broadest range of grazing and washing optics, OIO Bar provides exceptional flexibility for illuminating walls, architectural features, and textured surfaces. Narrow beam distributions create dramatic contrast and dimension, while wider beam angles deliver smooth, uniform illumination across surfaces.

Designed with biologically aligned circadian technology, OIO Bar combines architectural expression with visual comfort and wellness to support evolving modern environments.

Ideal for:

- Luxury Hospitality
- High-End Residential
- Corporate Lobbies
- Wellness & Spa Environments
- Restaurants & Entertainment Venues

**Where architectural expression meets
biologically aligned light.**

Circadian Metrics

**Beyond brightness.
Into biology.**

Most circadian metrics measure light.
OIO measures what biology actually receives.

We developed Blue per Lumen (BpL), a proprietary measurement of the biologically active light delivered with every lumen, reflecting how the body reads light.

By day, OIO delivers a spectrum rich in biologically active blue light, the signal the body uses for alertness, focus, and entrainment.

By evening, that same fixture automatically shifts to a low-blue spectrum that promotes melatonin production and cellular repair. The shift mirrors the spectral arc of sunlight, from morning sky to evening biological darkness.

OIO also meets melanopic Equivalent Daylight Illuminance (mEDI), the recognized industry standard. We measure both because both matter.

Measured by science. Validated by biology.

— Daytime Circadian Threshold — Evening Circadian Threshold

Evidence-Based Impact from OIO Circadian

Measurable Biological and Cognitive Effects

When circadian lighting is deployed with the correct spectrum, intensity, and timing, it does more than illuminate a space – it alters physiology.

In a year-long deployment inside a mission-critical control room, workers were exposed to biologically aligned light every hour of the day and night.

The results were tracked, measured, and verified:

- **67%** reduction in safety-critical errors.
- **50%** reduction in excessive sleepiness.
- **43%** reduction in pain medication use.

These outcomes reflect direct modulation of biological systems by circadian light impacting metabolism, hormonal cycles, and cognitive function.

Engineered Light, Grounded in Circadian Science

OIO technology, co-developed with Nobel-level collaborators, is engineered for uninterrupted performance in round-the-clock commercial environments and backed by **500+ patents**.

This is not simulated daylight. This is circadian stimulus, delivered with precision, stability, and biological relevance.

OIO is trusted by the world's most recognized brands for our proven impact, effortless integration, and enduring value.

We Don't Follow
the Standard.
We've Raised It.

**Korrus's Chief Scientist serves on
the WELL Building Advisory Board.**

We are actively engaged with the International WELL Building Institute to elevate the WELL standard for circadian and biologically aligned light, ensuring tomorrow's certified buildings deliver the biological outcomes today's research already demonstrates.

Designed for the Spaces That Shape How People Feel.

A small sample of valued customers.

Leading brands across hospitality, healthcare, workplace, and residential environments choose Korrus to create spaces centered on human wellbeing.

By combining biological science with architectural integration, we help deliver environments that feel better, perform better, and leave a lasting impression.

The Future of
Healthy Lighting is
Already Here.

Tuned to the body, trusted by design.
